Denys Melnyk
iOS / Swift Engineer

iOS Developer with 5+ years of experience delivering B2C mobile apps across lifestyle, utility, and IoT domains. Led full
product lifecycle from concept to App Store release, focusing on performance, stability, and user retention. Strong in
translating product goals into scalable architecture, driving UX improvements, and supporting growth through analytics,
experimentation, and data-driven decisions.

Work Experience

BladeTech Agency **Mar 2024 - Present**
iOS Developer
B2C Utility & Lifestyle iOS Applications
Built and shipped consumer-facing iOS applications from concept to App Store release. Collaborated with Product, Design, and Backend teams to deliver stable, scalable, and user-focused products, with an emphasis on performance, retention, and App Store compliance.

- Designed and developed iOS apps using Swift, SwiftUI, Combine, and Swift Concurrency.
- Built scalable architectures using MVVM and Clean Swift, with CoreData persistence and Keychain security.
- Integrated REST APIs, Firebase, AppsFlyer, and Facebook SDK for analytics, attribution, A/B testing, and deep linking.
- Set up CI/CD with Fastlane and GitHub Actions for automated builds, code signing, TestFlight, and App Store delivery.
- Improved performance and reliability through caching, async processing, API validation, and secure data handling.

Key Accomplishments

- Delivered 5+ production iOS apps with 99.8% crash-free sessions.
- Developed an aviation app with route management, METAR/TAF, checklists, timers, and real-time weather APIs.
- Built a kids learning app with interactive chapter flows, CoreAnimation, and CoreMotion.
- Implemented a workout app with streaks, challenges, reminders, deep links, and progress tracking.
- Adopted async/await and Actors to replace callback-based networking and locking-based caches, reducing race conditions and simplifying asynchronous code.

Tech Stack: Swift, SwiftUI, Combine, Swift Concurrency, MVVM, Clean Swift, CoreData, Keychain, Firebase, AppsFlyer, Facebook SDK, CoreAnimation, CoreMotion, Fastlane, GitHub Actions, TestFlight, REST APIs, Deep Links, Scrum, Kanban

Digifico GmbH **Mar 2023 - Mar 2024**
iOS Developer
Mobile Art Guide & Museum Experience App
Served as the sole iOS developer on a mobile art guide for self-guided museum experiences. Built and delivered the iOS product end-to-end for tourists and art enthusiasts using visual recognition and audio guides. Collaborated with the CEO, Designer, Backend Engineer, and QA to define scope, UX, technical solutions, and production releases.

- Owned end-to-end iOS development, architecture, feature implementation, testing, and App Store delivery.
- Designed scalable application flows using MVVM, Delegates, Closures, and NotificationCenter.

Skills

Programming Languages: Swift, Objective-C
iOS Frameworks: SwiftUI, UIKit, Combine, Swift Concurrency (async/await, Actors), AVFoundation, CoreAnimation, CoreMotion
Architecture: MVVM, MVVM-C, Clean Swift, MVC, Coordinator, Delegates, Closures
Data & Storage: CoreData, Keychain, UserDefaults, secure local storage, offline caching
Networking: REST API, GraphQL, URLSession, AWS Lambda, AWS S3, API validation
Maps & Location: CoreLocation, map overlays, weather APIs, WeatherKit, Dark Sky API
Device & Hardware: CoreBluetooth, BLE, WKWebView, WKScriptMessageHandler, CMSampleBuffer
Analytics & Marketing: AppsFlyer, Amplitude, Firebase, Crashlytics, Remote Config, Mixpanel, OneSignal
Tooling & Delivery: Fastlane, GitHub Actions, TestFlight, App Store Connect, ClickUp, Agile
Libraries & UI: SnapKit, SDWebImage, Kingfisher, localization, RTL, accessibility

• Migrated networking from REST to GraphQL with AWS Lambda backend and AWS S3 media delivery.
• Built custom camera functionality with AVFoundation, including zoom, framing overlays, and live capture using CMSampleBuffer.
• Implemented multilingual audio guides with auto-play, lock screen controls, and offline availability.
• Developed a dynamic localization system supporting 20+ languages and RTL layouts.
Key Accomplishments
• Reduced redundant API calls by ~30% and average screen load time by ~25% through the GraphQL migration.
• Developed artwork recognition flow and migrated recognition from on-device CoreML to server-side PyTorch models.
• Delivered localization for 20+ languages with RTL support using a JSON-based dynamic i18n engine.
• Resolved complex RTL UI issues using semanticContentAttribute, Auto Layout, and image handling.
• Integrated Mixpanel, TestFlight, SDWebImage, and Kingfisher to improve analytics, feedback cycles, image loading, and overall UX.
Tech stack: Swift, UIKit, MVVM, GraphQL, AWS Lambda, AWS S3, AVFoundation, CoreML, PyTorch, NotificationCenter, Auto Layout, Mixpanel, SDWebImage, Kingfisher, TestFlight

Deviark **Jan 2022 - Mar 2023**
iOS Developer
Cross-Domain iOS Applications – Health, IoT, Social & Weather
Built and shipped iOS applications across health, IoT, social, and weather domains under tight timelines. Delivered features independently and within small teams, focusing on stability, UX quality, performance, and scalable architecture.
• Owned iOS development across multiple products using MVC and MVVM architectures.
• Integrated live camera-based recognition using AVCaptureSession and custom image detection libraries.
• Adapted recognition model outputs into calorie tracking, UI logic, backend synchronization, and product flows.
• Built Bluetooth connectivity using CoreBluetooth for real-time hydration and temperature tracking from IoT hardware.
• Implemented CoreData persistence, local notifications, adaptive UI, BLE reconnection, and polling logic.
• Developed weather functionality using WeatherKit, Dark Sky, CoreLocation, and weather alert notifications.
Key Accomplishments
• Took ownership of a food recognition app mid-project, replacing the previous developer and driving iOS delivery forward.
• Shipped a smart bottle IoT app end-to-end, from technical research and BLE integration to App Store release as the sole iOS developer.
• Built reliable BLE communication and reconnection flows for continuous synchronization with IoT hardware.
• Contributed to architecture, sprint planning, code reviews, and feature delivery within a 3-developer iOS team.
• Improved Buzzer: Sports Community (1M+ downloads) through profile flows, subscriptions, video feed fixes, SnapKit-based UI, and REST API integration.
Tech Stack: Swift, UIKit, MVC, MVVM, AVCaptureSession, CoreBluetooth, CoreData, WeatherKit, CoreLocation, SnapKit, REST API

Education

iOS & Swift
The Complete iOS App Development Bootcamp, **Udemy**
Bachelor's Degree, Law
Taras Shevchenko National University of Kyiv

Freelance | Self-Employed **Jun 2021 - Jan 2022**

iOS Developer

International Client iOS Applications – Education, Creativity & Utility

Delivered iOS applications for 10+ international clients across education, creativity, and utility domains. Worked as the sole iOS developer, owning architecture, implementation, testing, and App Store delivery while collaborating with clients and cross-functional teams.

• Owned end-to-end iOS development using Swift, UIKit, MVVM-C, and Coordinator patterns.

• Translated product requirements and designs into scalable, production-ready mobile experiences.

• Implemented REST API integrations, local persistence, location-based functionality, and custom UI components.

• Managed analytics, testing, TestFlight distribution, App Store Connect, and production releases independently.

• Maintained application quality through debugging, performance optimization, and iterative feature delivery.

Key Accomplishments

• Delivered iOS products for 10+ international clients as the sole iOS developer.

• Built a learning app with daily study flows, progress tracking, short lessons, and offline Realm storage.

• Developed a writing app with autosave, word goals, mood tagging, and a distraction-free writing experience.

• Built a map-based utility app with saved locations, tagging, sharing, CoreLocation integration, and custom map overlays.

• Independently managed the complete release lifecycle from development and testing through TestFlight and App Store publication.

Tech Stack: Swift, UIKit, MVVM-C, Coordinator, Realm, CoreLocation, SnapKit, REST API, TestFlight, App Store Connect
